## SAFETY INSTRUCTIONS

- 1. Read this manual**
- 2. Follow all SAFETY INSTRUCTIONS as well as DANGER and OBLIGATION warnings**
- 3. Never incorporate equipment or accessories not approved by L-Acoustics®**
- 4. Read all the related PRODUCT INFORMATION documents before exploiting the system**

The product information document is included in the shipping carton of the related system component.

- 5. Read the USER MANUAL documents before installing the system**

All the user manuals are downloadable from the L-Acoustics® website.

- 6. Beware of sound levels**

Do not stay within close proximity of loudspeakers in operation and consider wearing earplugs.

Preset change can force loudspeaker systems to produce very high sound pressure levels (SPL) which can instantaneously lead to permanent hearing damage to performers, production crew and audience members. Hearing damage can also occur with prolonged exposure to sound: 8 h at 90 dB(A), 30 min at 110 dB(A), less than 4 min at 130 dB(A).

## SYMBOLS

The following symbols are used in this document:

### DANGER

This symbol indicates a potential risk of harm to an individual or damage to the product.

It can also notify the user about instructions that must be strictly followed to ensure safe installation or operation of the product.

### OBLIGATION

This symbol notifies the user about instructions that must be strictly followed to ensure proper installation or operation of the product.

### INFORMATION

This symbol notifies the user about complementary information or optional instructions.

## WELCOME TO L-ACOUSTICS®

Thank you for choosing L-Acoustics®.

This document gathers essential information about the factory presets dedicated to the operation of L-Acoustics® loudspeaker enclosures with L-Acoustics® amplified controllers. Carefully read this document in order to become familiar with the preset libraries.

## 1 Introduction

The L-Acoustics® amplified controllers are delivered with onboard firmware and preset library.

A preset of the onboard library can be loaded from the front panel of the amplified controller, or from the **LA Network Manager** software application, a management tool dedicated to the remote control and monitoring of a network of L-Acoustics® amplified controllers.

**LA Network Manager** must be used for updating firmware on L-Acoustics® amplified controllers. An up-to-date preset library is automatically installed with the firmware. Check the L-Acoustics® website for the latest version of software, firmware and libraries.

### **Operating L-Acoustics® amplified controllers**

Refer to the **LA4, LA4X, LA8 and LA-RAK user manuals**.

### **Installing LA Network Manager software**

Download the **LA Amplified Controllers release pack** and refer to the **Readme** file.

### **Updating Firmware on an L-Acoustics® amplified controller**

Refer to the **LA Network Manager video tutorial**, accessible from the software.

## 2 Preset design

### 2.1 Gain structure

---

The gains of all L-Acoustics® factory presets are calibrated with a reference pink noise signal, representative of most demanding musical programs. The reference input level is 0 dBu with analog audio source or -22 dBFS with digital audio source. When feeding L-Acoustics® amplified controllers at this input level, L-Acoustics® loudspeaker enclosures provide the sound engineer with 8 dB of headroom, except for the ones of smaller format - MTD108a, 5XT, 8XT, Kiva, SB15m and Kilo - calibrated for 4 dB of headroom.

This gain structure facilitates managing the power resources of L-Acoustics® systems when using various types of enclosures of the same format. With default output gain settings (0 dB), all enclosures will reach their limits for the same input signal level. The only gain adjustment to apply is -4 dB for MTD108a, 5XT, 8XT, Kiva, SB15m or Kilo enclosures that would be used along with L-Acoustics® loudspeaker enclosures of bigger format.

### 2.2 Electro-acoustic coupling

---

Each recommended loudspeaker configuration provides a coherent sound source, by implementing a loudspeaker system in a specific deployment pattern and with defined factory presets.

L-Acoustics® factory presets secure the coupling between the different transducer sections, whether it is internal coupling as in active loudspeaker enclosures, or external coupling as when several loudspeaker enclosures are combined.

Users can adjust preset parameters on top of factory settings and for predefined channel sets.

Channel sets have been defined for the presets dedicated to active loudspeaker enclosures and to some specific loudspeaker configurations. A channel set maintains a coherent coupling by linking several output channels for the setting of routing, gain and delay parameters. For example, [LF HF] is a channel set for 2-way loudspeaker enclosure presets, and [SR SB SB SB] is a channel set for cardioid subwoofer presets.

The sections 4 to 7 of this document are dedicated to the different L-Acoustics® product families. They feature tables describing the recommended loudspeaker configurations for each system, with the corresponding factory presets and the main resulting acoustic properties.

When applicable, refer to the user manual of the related system for the limit between *coupled vs separated* subwoofers.

For some loudspeaker enclosure combinations, it is still necessary to adjust the delay values for time-alignment. Refer to section 8 for pre-alignment delay values.

---

## 2.3 Frequency response contour

---

For coaxial loudspeaker enclosures, L-Acoustics® provides 3 distinct contours:

- The \_FR presets, for most of FOH applications;
- The \_FI presets, for spoken word, classical music, jazz, or fill systems;
- The \_MO presets, for half-space loading conditions, typically monitor applications.

For current WST® systems, L-Acoustics® provides 1 or 2 distinct contours:

- A *main* preset, ensuring a reference FOH contour to the line source with usual deployment parameters;
- An additional \_FI preset, *for some systems only*, dedicated to loudspeaker enclosures used as a fill system.

The oldest WST® systems inherit from a legacy preset structure (\_HI and \_LO presets).

If necessary, users can adjust the sonic signature of L-Acoustics® systems through the *Contour EQ* tools in LA Network Manager.

The Array Morphing tool provides two parameters, *zoom factor* and *LF contour*, that allow users to adjust the response of a WST® system. At any reference listening distance and with any line source length, the engineer can obtain the sonic signature of a bigger, smaller, closer or further system, and can unify the sonic signature of multiple sources. Refer to the **LA Network Manager video tutorial** and **ARRAY MORPHING white paper** for detailed information.

### 3 Onboard preset libraries

#### Power resources

Each onboard preset library includes the L-Acoustics® loudspeaker enclosures whose power requirements match the delivering capability of the corresponding amplified controller.

**LA8 Preset Library** covers all L-Acoustics® loudspeaker enclosures. **LA4X Preset Library** is restricted to loudspeaker enclosures that require no more than 1000 W into 8 Ω or 1000 W into 4 Ω. **LA4 Preset Library** is restricted to loudspeaker enclosures that require no more than 800 W into 8 Ω or 1000 W into 4 Ω.

#### 3.1 LA4 Amplified Controller

The LA4 onboard Preset Library is stored in the factory memory locations (from 011 to 199) of the controller.

The memory locations from 001 to 010 are dedicated to the storage of presets modified by the user.

In the table below, each of the factory presets is described with its memory location number, name, and family.

### 3.4 FLAT presets

#### Protection

The transducer connected to an output channel of a flat preset is not protected by L-DRIVE. The only active limitation allows minimizing clipping risks to protect the amplifier.

When driving a 3<sup>rd</sup> party loudspeaker enclosure, it is then recommended to use an external DSP device with a preset specifically designed for this model.

With a flat preset, an input signal is amplified and directly routed to output without any modification of the frequency response. All the output parameters are accessible (Mute, Gain, Delay, Polarity, and Routing).

Using the [FLAT\_\*\*\*] preset with LA4 or LA4X provides 6 dB of headroom. Using the [FLAT\_LA8] preset with LA8 provides 8 dB of headroom.

[FLAT\_\*\*\*]

Amplifier outputs	Channels	Default parameters				
		Routing	Gain	Delay	Polarity	Mute
OUT 1	PA	IN A	0 dB	0 ms	+	ON
OUT 2	PA	IN A	0 dB	0 ms	+	ON
OUT 3	PA	IN B	0 dB	0 ms	+	ON

## 4 Variable curvature WST systems

The factory presets dedicated to variable curvature WST® line sources are optimized for **long throw** applications.

In the following sections, tables describe the loudspeaker configurations and the factory presets for each system. Discriminant acoustic properties of each loudspeaker configuration are given, such as -10 dB bandwidth or LF limit, frequency response contour, or directivity specificity.

### 4.1 K1

#### Compatibility issues

[K1] and [KARADOWNK1] from Preset Library 4.x are not compatible with [K1] and [KARADOWNK1] from earlier versions of the Preset Library.

[K2 \*\*\*] presets are not compatible with [K1] from earlier versions of the Preset Library.

Compatibility issues may occur when working from a Session file with units using older presets.

Use the same version of the Preset Library for all units within a single line source.

Loudspeaker configuration	LA8 preset(s)			Acoustic properties
	K1	K1-SB	SB28 *	
K1 line source	[K1]	-	-	35 Hz-20 kHz
K1 / K1-SB line source (K1-SB on top)	[K1]	[K1SB_X]	-	Enhanced LF throw
K1 line source + coupled K1-SB subwoofers (beside or behind)	[K1]	[K1SB_60]	-	Down to 30 Hz Reinforced LF contour LF rejection (side polarized or rear cardioid)
K1 line source + SB28 subwoofers	[K1]	-	[SB28_60]	Down to 25 Hz Reinforced LF contour

\* With SB28 subwoofers as a cardioid array, use [SB28\_60\_C].

## 8 Pre-alignment delay values

### Time-alignment from geometric measurements

When combining several loudspeaker systems, it is important to adjust their delay values to optimize acoustic summation. If no acoustic measurement tool is available, it is possible to use the *pre-alignment delay* values given in the tables on this section.

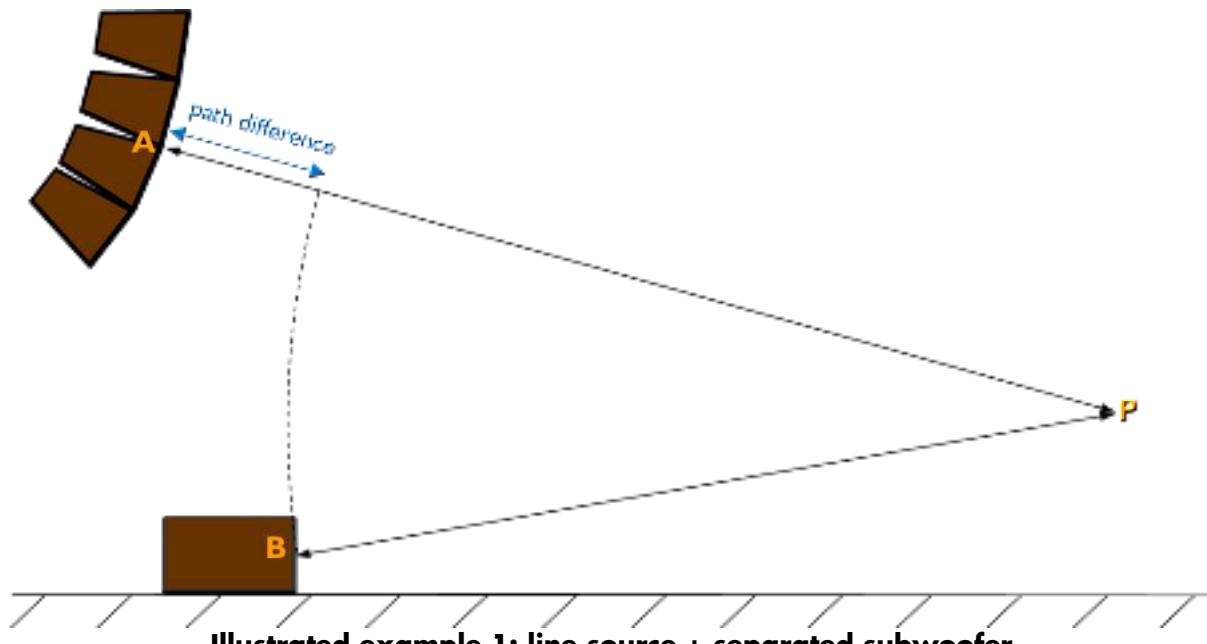

*Pre-alignment delays* have been measured with the enclosures at the same geometric location, front face on the same plane.

After adding these values to the factory presets, time-alignment is then obtained by adding the *geometric delay* to the closest system. The *geometric delay* is calculated from the path difference between a reference listening point and the center of each system.

#### How to proceed?

1. Measure the *Path difference*:  $\mathbf{PA} - \mathbf{PB}$ , with:
  - $\mathbf{P}$ : reference listening point,
  - $\mathbf{A}$ : center of the further system, named **system a**,
  - $\mathbf{B}$ : center of the closest system, named **system b**.
2. Calculate the *Geometric delay* (s):  $\text{Path difference (m)} / \text{Sound velocity (m.s}^{-1}\text{)}$ , with:
  - Sound velocity  $\approx 340 \text{ m.s}^{-1}$  at  $20^\circ\text{C}$  and in dry air.
3. Refer to the tables of this section to find the *Pre-alignment delay a* and the *Pre-alignment delay b*, corresponding to the **system a + system b** combination.
4. Add the *Alignment delay* to the factory preset of each system. Being the closest to the reference listening point, the geometric delay must be added to the **system b** only:
  - Alignment delay (ms) for **system a** = Pre-alignment delay **a** (ms),
  - Alignment delay (ms) for **system b** = Pre-alignment delay **b** (ms) + Geometric delay (ms).

**Normalization:** If  $\neq 0$ , retrieve *Pre-alignment delay a* to both *Alignment delay* values.

**Illustrated example 1: line source + separated subwoofer**

### Laser rangefinders

The L-Acoustics® **Tech Toolcase** includes two laser devices that can be used for geometric measurements: TruPulse™ 200 and Leica DISTO™ D3.

## 9 Enclosure drive capacity per amplified controller

The tables below describe the maximum number of enclosures a single amplified controller can drive.

### 9.1 LA4 Amplified Controller

Technology	Loudspeaker enclosure	Max number of connections per output *	Max number of enclosures per controller
Coaxial	5XT	3	12
	8XT	2	8
	Active 12XT	2	4
	Passive 12XT	1	4
	115XT HiQ	1	2
	112XT	2	4
	115XT	2	4
	MTD108a	2	8
	MTD112b	1	4
	Active MTD115b	1	2
	Passive MTD115b	1	4
Constant Curvature WST	ARCS® Wide/Focus	1	4
	ARCS	1	2
Variable Curvature WST	Kiva / Kilo	2	8
Subwoofers	SB15m	1	4
	SB18	1	4
	SB118	1	4

\* For passive loudspeakers, the value corresponds to the number of enclosures in parallel on the output.

For active loudspeakers, the value corresponds to the number of sections in parallel on the output.

## 9.2 LA4X Amplified Controller

Technology	Loudspeaker enclosure	Max number of connections per output *	Max number of enclosures per controller
Coaxial	5XT	4	16
	8XT	2	8
	Passive 12XT	1	4
	Active 12XT	2	4
	115XT HiQ	1	2
Constant Curvature WST	ARCS® Wide/Focus	1	4
	ARCS® II	1	2
Variable Curvature WST	Kiva / Kilo	2	8
	Kara®	2	4
	Kudo®	1	1
	K2	1	1
Subwoofers	SB15m	1	4
	SB18	1	4

\* For passive loudspeakers, the value corresponds to the number of enclosures in parallel on the output.

For active loudspeakers, the value corresponds to the number of sections in parallel on the output.

For ARCS, SB118, the MTD series, 112XT and 115XT, refer to the enclosure drive capacity table for LA4.

### 9.3 LA8 Amplified Controller

Technology	Loudspeaker enclosure	Max number of connections per output *	Max number of enclosures per controller
Coaxial	5XT	6	24
	8XT	3	12
	Passive 12XT	2	8
	Active 12XT	3	6
	115XT HiQ	2	4
	112XT	3	6

	Active MTD115b	2	4
Constant Curvature WST	ARCS® Wide/Focus	2	8
	ARCS® II	2	4
	ARCS	3	6
Variable Curvature WST	Kiva / Kilo	3	12
	Kara®	3	6
	Kudo®	3	3
	K2	3	3
	K1®	2	2
	K1-SB	1	4
	V-DOSC	2	2
	dV-DOSC	3	6
Subwoofers	SB15m	2	8
	SB18	2	8
	SB28	1	4
	SB118	2	8
	SB218	1	4
	dV-SUB	1	4

\* For passive loudspeakers, the value corresponds to the number of enclosures in parallel on the output.

For active loudspeakers, the value corresponds to the number of sections in parallel on the output.
